Applied Data Science Capstone
Battle of the Vancouver Neighbourhoods
Author: Marijn Heuts

Data
For this project, I will make use of a couple of different data sets.

- Local Area Boundry of the City of Vancouver.

This dataset contains both a CSV file containing the neighbourhoods of Vancouver with its location data and a geojson file with the boundary data of the different areas.

- Census Local Area Profiles 2016 of the City of Vancouver

This dataset contains a CSV file with much information of the people living in the different neighbourhoods.

- Vancouver Crime Report

This dataset contains a CSV file on the crimes reported in the city of Vancouver.

- FourSquare API

This dataset contains data on the different venues available around the world.

With these datasets, it will be possible to answer different aspects of this research.
